

## *Environmental Policy*

### **We respect our earth whilst striving for the highest technology in our works**

We believe that respect for the environment is an integral part of our business. We are aware of our possible impact on the global environment and we are committed to planning and executing all work processes with the lowest possible imprint on the environment.

We focus on minimizing energy consumption to avoid waste and excess consumption of materials. We work closely with our customers on the individual projects to include environmental measures and procedures from the concept design phase through to project handover, to minimize the environmental impact.

### **We comply with laws and agreements**

Compliance with applicable laws, regulations and mutual agreements are fundamental preconditions for the way we work. We comply with internationally accepted guidelines to reduce our impact on the global environment.

### **We demonstrate environmental considerations**

We are committed to achieving high environmental standards and minimizing the environmental impacts in the planning and design phase as well as in execution technique.

### **We all hold responsibility for the environment**

We make sure that all our employees are aware of environmental issues and involved in environmental activities with priority to protecting the environment on both a short and long-term basis.

### **We urge invisible site concept**

We try our best to be, for the greatest extent, invisible at our sites. We organize our sites ensuring that public can continue using the routes and facilities, the same as they were prior to commencement of our works.
